

New Product Introduction

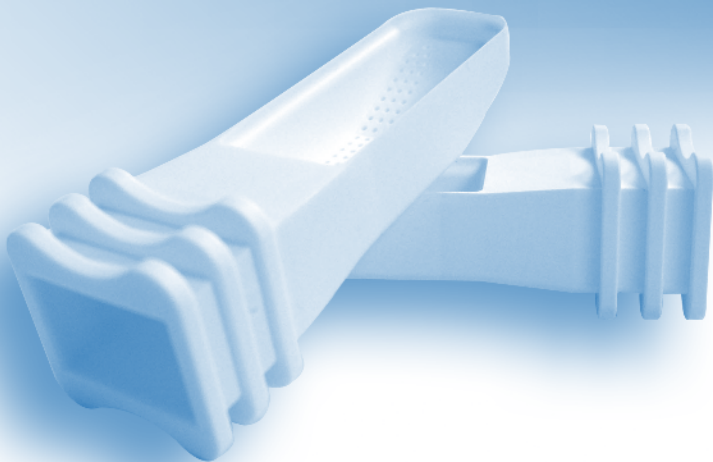

eTrap™ - polyp trap

Magnifying windows

Easy-grip specimen strainer

eTrap includes two specimen strainers

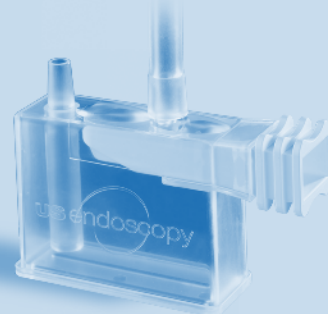

US endoscopy

listening... and delivering solutions

Designed by nurses...

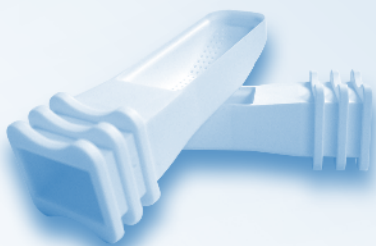

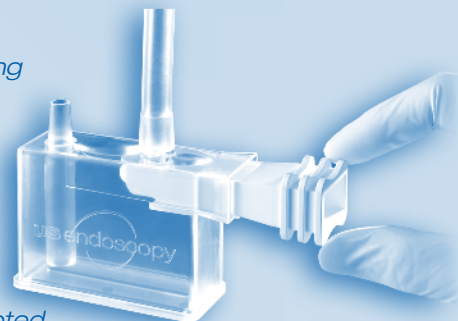

When US Endoscopy set out to design the ideal polyp trap we interviewed numerous clinicians, formulating an impressive wish list. The result: a polyp trap that allows for quick and accurate retrieval while safeguarding clinicians from unnecessary exposure to biomaterial. The eTrap offers the simplicity desired by clinicians and effectiveness both you and your patients deserve.

The eTrap™ - a polyp trap designed with you in mind...

Easy-grip removable specimen strainers offer:

- **Protection for clinicians** with little or no biomaterial exposure – no more sifting through effluent to locate a specimen
- A **simple and effective method for accurate identification** of each specimen collected – simply remove the strainer and immerse the specimen in fixative
- **Reassurance for the clinician and patient** with collection of the entire resected polyp
- Timesavings and efficiency with a **free 2nd specimen strainer** for uninterrupted suction and immediate subsequent polyp retrieval – enabling **multiple polyp collection**

Central collection chamber offers:

- **Enhanced visual verification** of the specimen with 2 magnifying windows
- Convenience with **reduced risk of biohazard** or sample contamination as a disposable device
- A unique, **streamlined design for simultaneous fluid** cycling into the main suction receptacle with effortless specimen capture

For more information on the eTrap, contact US Endoscopy today.
